PROFESSIONAL SUMMARY

Data Analyst skilled in SQL, Python, and Excel, with hands-on experience transforming raw datasets into actionable insights. Proficient in building interactive dashboards using Tableau and Google Data Studio to communicate business trends. Adept at data cleaning, exploratory analysis, and producing accurate reports. A collaborative problem-solver who supports data-driven decisions across teams.

EDUCATION

B.Tech – Computer Science & Artificial Intelligence2024 – 2028

Newton School of Technology, Rishihood University

Intermediate (Class XII) – Science2024

Gobind International Public School

Matriculation (Class X)2022

Gobind International Public School

PROJECTS

NYC Real Estate Market Analysis [\[GitHub\]](#) [\[Live Dashboard\]](#)

Python · Pandas · NumPy · Matplotlib · Seaborn · Tableau

- Performed end-to-end exploratory data analysis on NYC property transaction data, cleaning records to uncover pricing trends, borough-level distributions, seasonal patterns, and key statistical outliers.
- Engineered features such as building age and location metrics; visualized price-per-sqft variations and building class correlations across all five boroughs using Matplotlib, Seaborn, and NumPy tools.
- Built an interactive Tableau dashboard for neighborhood-level pricing trends; key finding: Manhattan properties commanded a 40% price premium compared to all other New York City boroughs combined.

Blinkit E-Commerce Data Visualization & Analysis [\[GitHub\]](#) [\[Live Dashboard\]](#)

Google Sheets · Google Data Studio

- Tracked KPIs — revenue, delivery performance, outlet size, and customer preferences — and built a dynamic real-time Data Studio dashboard for stakeholder reporting, tracking, and informed decision-making.
- Identified top-performing SKUs and underperforming outlet types; recommended inventory optimization strategies based on detailed sales segmentation, trend analysis, and outlet-level performance metrics.
- Analyzed correlations between outlet size, product fat content, and item visibility to generate actionable merchandising insights for improving product placement decisions and boosting overall sales revenue.

Internship Opportunities Analysis [\[GitHub\]](#) [\[Live Dashboard\]](#)

Google Sheets · Pivot Tables

- Cleaned and analyzed internship posting data to study stipend ranges, required skills, and duration patterns across various data-related roles available in the current entry-level job market today.
- Identified Python, SQL, and Excel as the top three in-demand skills; roles requiring both Python and SQL commanded 35% higher stipends on average than roles requiring only one technical skill.
- Built pivot-table dashboards in Google Sheets to visualize skill frequency distributions and role-type breakdowns, providing clear data-backed insights for actionable career planning and skill prioritization goals.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Libraries: Pandas, NumPy, Matplotlib, Seaborn

Data Visualization: Tableau, Google Data Studio, Excel Charts, Dashboarding

Tools & Platforms: Jupyter Notebook, Git & GitHub, Google Sheets, Microsoft Excel

Concepts: Exploratory Data Analysis (EDA), Data Cleaning, Business Intelligence, Statistics

Soft Skills: Analytical Thinking, Data Storytelling, Problem Solving, Attention to Detail, Collaboration
